

Harvest Pillar For ORCHARDS

Set your orchard up for success with a prestressed concrete trellis system designed for high density operations.

High Density Equals High Yields

Grow fruit, not a tree trunk. Harvest Pillar is specially designed for high density orchards because it can handle extreme weights. Wood snaps. Steel bends. Harvest Pillar stands strong.

Optimal For Organic Orchards

Wood posts need to be pressure treated with harsh chemicals so they don't quickly erode. That's bad news for organic orchards. Harvest Pillar is concrete. Cement. Sand. Water. Simple. Organic.

Durable For Decades

No rotting. No rusting. No warping. No decay. Trust Harvest Pillar to be your fruits best friend year after year. Pass down a trellis system to the next generation of growers in your family.

Durable Posts. Sized for Growth.

Our posts come in sizes ranging from 6' to 24' high and 3" to 5" in width. We offer a variety of Harvest Pillar products for all your trellising needs, including brackets, anchors, and wire.

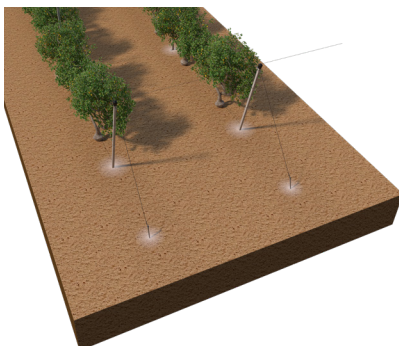

Orchard Example

LINE POST

Typical profile 3" x 3" x L'

The resiliency of Harvest Pillar posts is allowing customers to increase spacing in most applications, saving money with less posts per acre.

END POST

Typical profile 4" x 4" x L'

Harvest Pillar end posts are ideal for heavy loading typical in high density orchard installations without issues.

Contact us for a custom trellis solution.

L= length varies based on application.
